

Below is the Sweetwater Springs Water District monthly water sales through July. It's important to note that the District has bimonthly billing - the billings in the even months, which includes the latest month shown, have fewer customers than those in the odd months, and the billings reflect water usage in two months - the July amount, for example, reflects water use on meters read the first of August for June and July water use in the Guerneville part of our system. Our August water sales amounts will be available in a couple days. If that is soon enough for you I can have an updated report at that time. We didn't do as well in July as in June – that may be a reflection that the billings are in the other half of the District.

During July District staff spent considerable staff time addressing customer requests for information and assistance and fixing system water leaks. New District water rates went into effect in July, our higher water users have noticed the difference, and many have talked to us – the rates are having an effect. The rates include inclining tiered rates with a relatively high tier 4 rate (\$5.00/Hcf) to encourage wise water use at all times.

Please contact me if you have any questions or need more information.
