

The Penngrove Town District (PTD) of the PWC consumed 881,342 cu.ft of water delivered from the Petaluma Aqueduct in September 2009. In September 2004, PTD customers consumed 1,186,298 cu.ft. The reduction from 2004 is 25.7% -- amazing what a high "conservation tier" will encourage. In both cases, supply from the SCWA exceeds the metered consumption by an estimated 3% due to losses.

Hope this helps. Contact me if additional data is required.
